

# AI/ML INTELLIGENCE HACKATHON

Official Participant Guidelines

June 15 – June 20, 2026 | Fully Remote

## 1. Overview

The AI/ML Intelligence Hackathon is a one-week, fully remote competition where participants build machine learning and AI solutions for real-world inspired data intelligence problems. Teams will work with curated datasets to develop models for analysis, prediction, and insight generation across multiple challenge tracks.

Format: Fully Remote | Team-based (2–4 members recommended) | 1-week development period

Final Presentation: Live judging session — top 10 teams only

Contact: [guru.aihackathon@gmail.com](mailto:guru.aihackathon@gmail.com)

## 2. Prize Structure

The following prizes will be awarded to the top-ranked teams at the conclusion of the final judging session:

| Rank      | Prize              | Amount     |
|-----------|--------------------|------------|
| 1st Place | First Place Prize  | NPR 25,000 |
| 2nd Place | Second Place Prize | NPR 15,000 |

*Note: Prize disbursement details will be communicated to winners following the final presentation session.*

## 3. Challenge Tracks

Participants must select and build within one of the following challenge tracks:

| Track                                         | Description                                                                               |
|-----------------------------------------------|-------------------------------------------------------------------------------------------|
| <b>Signal vs Noise Detection</b>              | Build systems that identify low-quality, incomplete, or irrelevant data entries.          |
| <b>Entity Resolution &amp; Record Linkage</b> | Match and merge records that refer to the same real-world entity despite inconsistencies. |

|                                            |                                                                            |
|--------------------------------------------|----------------------------------------------------------------------------|
| <b>Network &amp; Graph Intelligence</b>    | Analyze relationships, build graphs, and extract structural insights.      |
| <b>Risk Scoring &amp; Prioritization</b>   | Develop models to rank or prioritize entities based on risk or importance. |
| <b>Pattern &amp; Behavior Discovery</b>    | Use unsupervised learning to identify hidden patterns or clusters in data. |
| <b>AI-Powered Analysis &amp; Reporting</b> | Generate structured insights, summaries, and analytical reports from data. |

## 4. Timeline

| Milestone                  | Date          | Notes                                         |
|----------------------------|---------------|-----------------------------------------------|
| <b>Hackathon Start</b>     | June 15, 2026 | Development period opens                      |
| <b>Submission Deadline</b> | June 19, 2026 | All deliverables due by end of day (12:00 am) |
| <b>Final Presentation</b>  | June 20, 2026 | Top 10 teams only selected for live judging   |

## 5. Mandatory Submission Requirements

Each team must submit all of the following to be considered for evaluation:

- Exploratory Data Analysis (EDA) notebook (Google Colab or Jupyter)
- Working ML/AI model or system
- Source code via a public GitHub repository (link required: see Section 6)
- Technical documentation
- Final presentation slide deck (PPT format)

### **Incomplete submissions will not be evaluated.**

All five components above are required. Submissions missing any element (including the GitHub repository link) will be disqualified from scoring.

## 6. Source Code Requirement

All teams must share their source code as a condition of submission. The following applies:

- A public GitHub repository link must be included in the final submission.
- The repository must contain all code used to build the solution, including data preprocessing, model training, evaluation, and any inference or reporting scripts.

- Repositories that are private, incomplete, or inaccessible at the time of evaluation will result in disqualification.
- Commit history is expected to reflect genuine development activity. Bulk uploads at the deadline will be flagged for review.

## 7. EDA Requirements

---

All teams must include an Exploratory Data Analysis section covering the following:

- Dataset overview (row count, column count, data types)
- Missing value analysis
- Data quality issues identified
- Feature distributions
- Correlations or relationships between variables (where applicable)
- Summary of key insights derived from the dataset

## 8. AI and LLM Usage Policy

---

The use of large language models (LLMs) and generative AI tools is permitted subject to the following restrictions:

- **Only open-source LLMs are permitted.** This includes models such as LLaMA, Mistral, Falcon, and other publicly available open-weight models.
- Proprietary or closed-source LLMs, including but not limited to OpenAI GPT models, Google Gemini, Anthropic Claude, and similar commercial APIs are strictly prohibited.
- Teams must clearly disclose in their documentation which LLM(s) were used, the version or model checkpoint, and how they were integrated into the solution.
- Undisclosed use of prohibited models will be treated as a violation of the originality rule and may result in disqualification.

Clarification: The restriction on proprietary LLMs applies to model inference (i.e., using an LLM as part of your solution). Open-source libraries, frameworks (e.g., Hugging Face Transformers, LangChain, PyTorch), and development tools are freely permitted regardless of their licensing.

## 9. Final Presentation & Selection

---

The final live presentation and judging session will take place on June 20, 2026.

- **Only the top 10 teams** will be invited to the final presentation session. Selection is based on scores from the initial submission evaluation.
- Teams not in the top 10 will receive no further communication after the submission deadline.
- Shortlisted teams will be notified by the organizers with session logistics and timing before June 20.

- Each team will present their solution live; the judging panel will ask questions and score teams based on the evaluation criteria in Section 11.
- Failure to attend the final presentation forfeits the team's placement and prize eligibility.

## 10. Rules & Conduct

---

- All submitted work must be original and developed during the hackathon period.
- External libraries, open-source frameworks, and APIs are permitted unless explicitly restricted by these guidelines.
- Only open-source LLMs may be used (see Section 8). Proprietary LLM APIs are prohibited.
- Teams may use any ML/AI framework (e.g., TensorFlow, PyTorch, scikit-learn, Hugging Face).
- Plagiarism, code reuse from prior submissions, or use of prohibited tools will result in immediate disqualification.
- Team size: 2–4 members recommended. Individuals may participate but are subject to the same requirements.
- All team members must be identified at the time of registration. Post-deadline additions are not permitted.

## 11. Evaluation Criteria

---

Submissions will be scored by the judging panel using the following weighted criteria:

| Criterion                        | Weight      | Score (max)    |
|----------------------------------|-------------|----------------|
| Technical Approach               | 30%         | 30 pts         |
| Model Performance                | 25%         | 25 pts         |
| Data Understanding / EDA Quality | 15%         | 15 pts         |
| Innovation                       | 15%         | 15 pts         |
| Practical Usefulness             | 10%         | 10 pts         |
| Presentation Quality             | 5%          | 5 pts          |
| <b>TOTAL</b>                     | <b>100%</b> | <b>100 pts</b> |

## 12. Submission Format

---

All submissions must be made before the June 19 deadline and include:

1. Public GitHub repository link (with complete source code)
2. One ZIP file containing:
  - Slide deck in PPT format
  - EDA notebook (.ipynb: Google Colab or Jupyter)
  - Technical documentation (included in repository or as a separate PDF)

ZIP Naming Convention:

TeamName\_Track\_Submission.zip

Example:

DataWizards\_Fintech\_Submission.zip

Only the latest submission received before the deadline will be considered for evaluation. Submissions that do not include all four components will not be evaluated.

## 13. Contact

---

For all queries, clarifications, or technical issues related to the hackathon:

Email: [guru.aihackathon@gmail.com](mailto:guru.aihackathon@gmail.com)

Response times may vary. Participants are encouraged to submit queries at least 48 hours before the submission deadline to allow adequate response time.
